

Breeding Shed Requirements

All Barren mares must present a negative uterine culture for each breeding cycle

Maiden and *Foaling* mares do not require a culture for the first breeding cycle.

All return breedings, after the first breeding cycle, require a clean culture.

All mares should be vaccinated for Equine Herpes Virus-1 (Rhinomune, Pneumabort-K, etc.) from 7-90 days prior to breeding

Maiden Mares must be jumped prior to arriving at the breeding shed. We reserve the right to turn away any mare that is a risk for Injury to the stallion and/or personnel

All mares must be properly identified with halter nameplate or neck strap.

No mare will be bred without a signed breeding contract on file in our office.

We request that, if possible, no foal come with the mare to the breeding shed. If the foal must accompany the mare, the truck with the foal will be moved far enough away that the mare can't hear the foal during breeding.

Permission to Tranquilize: Should it become necessary to breed your mare, Rockridge would like your permission to tranquilize. Please discuss this when you book your mare.
